

How to drill a water well with a

What is well drilling?

Well drilling is a fundamental process that involves creating access to underground water sources for various purposes. This essential technique is utilized in agriculture, residential, commercial, and industrial settings to secure a reliable supply of water.

What type of drilling is used in a water well?

Auger Drilling- This is the most common type of drilling used, particularly for water wells. It uses a rotating shaft that has teeth to dig through the ground. Cable Drilling - This type of drilling uses a cable reel pulled through the ground by a truck. Chemical Drilling - This makes the ground easier to drill through.

How do you drill a well?

The method consists of 3 different kinds of drill bits and a bailer. Drilling the well starts with the core auger, drilling through layers of loose dirt and clay. The auger can be emptied by pushing the contents on a stick dug in the ground. The drilling speed in this process was about 8 meters per hour.
