How do drilling engineers choose a drilling rig?

After geologists develop a prospect and define desired well locations, and a surveyor spots the exact well location on the surface, the drilling engineer selects the rig. The drilling contractor then defines his rig requirements with respect to surface space, rig weight, turnarounds, and footing.

How to transport a drilling rig?

Way too bulky to be transported in a common way. Surprisingly, a rather small kind of boat is best for the job: the ALP Striker- one of the strongest ocean tugs in the world. The ALP Striker will pull the drilling rig across the oceans on arm-thick steel cables. They are so heavy that only the ship's own crane can move them.

How is a drilling rig towed around the world?

A drilling rig is towed around the world by a single tug. A brand-new drilling rig, worth 500 million dollars, has to go from South Korea to Europe. A drilling rig is towed around the world by a single tug. A brand-new drilling rig, worth 500 million dollars, has to go from South Korea to Europe.
