What is reverse circulation drilling?

'Reverse Circulation' drilling involves the supply of air down through the drill-string to decrease the 'effective density' of the water in the center of the drill-string. Operating much like an 'air-lift', the drilling spoils are carried out of the hole through this rising column lower-density air/water mixture (see Figure).

Does drilling supply store sell drilling rigs?

With Drilling Supply Store, buying drilling tools has never been easier. We offer a complete line of drilling rigs for mineral exploration (RC drilling and coring), water well and geothermal drilling, foundations and other construction or mining applications. What is a swivel drill rig used for?

Typical applications are hard rock and case advance drilling. High quality swivels designed to adapt traditional European drill rigs for reverse circulation rock drilling. From 24" (with down-the-hole-hammers) through 120" diameter cluster drills and everything in between.

Does HD offer RC hammer drilling systems?

HD offers a range of DTH hammers and underreaming systems, both conventional and reverse-circulation (RC). And, for the large diameter DTH RC hammer drilling systems, with the single RC hammer drilling systems for 300 - 1000 mm dia.

What is a Berminghammer reverse circulation drill?

Berminghammer reverse circulation drilling equipment is suited to all rock drilling methodologies; conventional rotary, down-the-hole hammer or cluster drill. The Berminghammer line of Reverse Circulation Drills were developed in-house by a joint effort of the Construction division and Berminghammer.

What is a reverse circulation drill string?

The industry's most durable and versatile reverse circulation drill string. 2 to 3 separate drilling passages to accommodate mixtures of air, water and drilling foams. Spoils return passages up to 9.75 inches in diameter. Made in Canada, these high-quality conventional rotary bits are for rock around 100-200 MPa.
